

Cardiovascular remodeling in living kidney donors with reduced glomerular filtration rate (GFR)

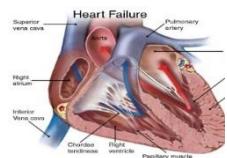

Stipendiat Kjersti Blom

The heart and the kidney

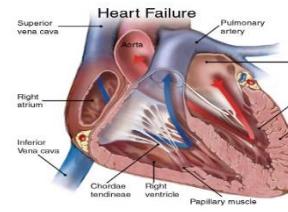

To summarize

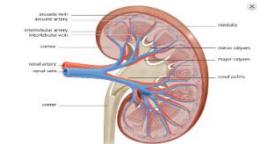

Hypertrophy

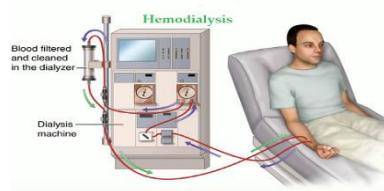

Heart failure

Remodeling

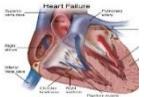

CKD3-5

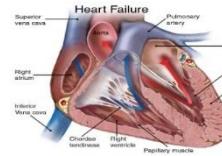

Hemodialysis

To summarize

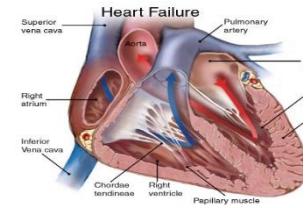

Early changes

Hypertrophy

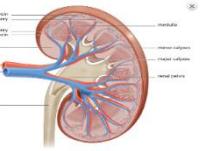

Heart failure

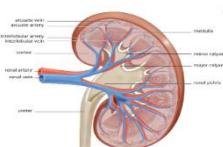

Remodeling

CKD1-2

CKD3-5

Hemodialysis

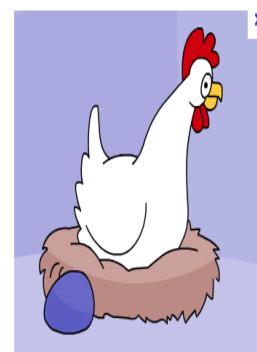

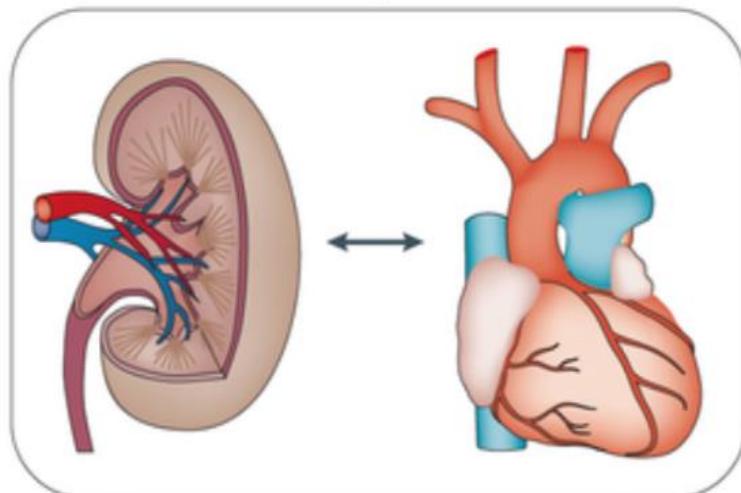

Kidney patients are often multimorbid

Hypertension

Coronary disease

Diabetes

Pulmonary disease

Lab experiment

**Unilateral
Nephrectomy**

**Evaluate changes
in cardiac structure**

Control group

CENS  - main design

Kidney donors

CENS[®] - main design

Kidney donors

Hypothesis:

There are structural and functional changes in the heart in living kidney donors due to reduced GFR.

Control group

- 1: Healthy siblings
- 2: Evaluated for donation
Not found suitable due to vascular anatomy

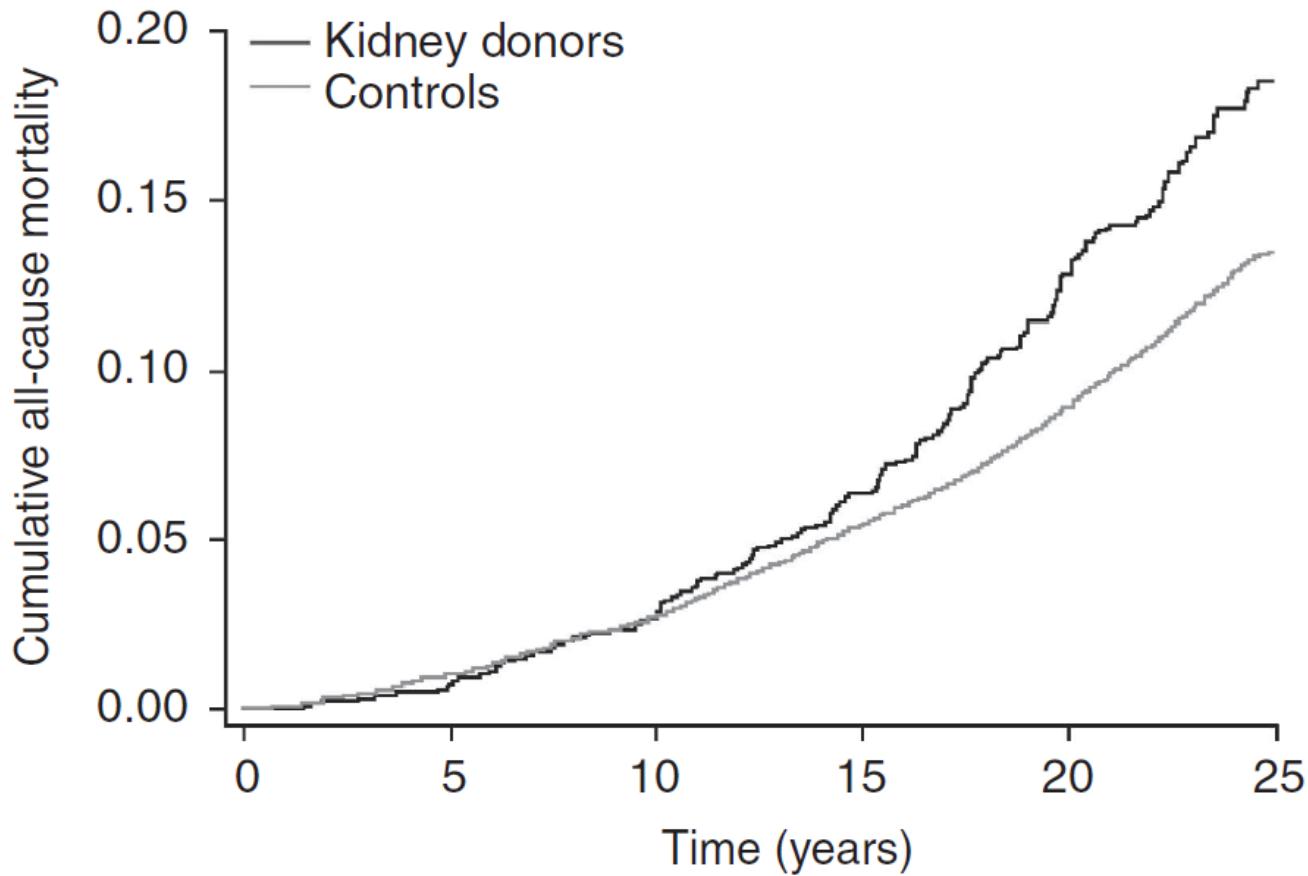

Figure 2 | Cumulative mortality risk in kidney donors and controls, adjusted for year of donation. Controls are matched to donors for age, sex, systolic blood pressure, body mass index, and smoking status.

CENS[®] - main design

Evaluate
and send
application

Rikshospitalet

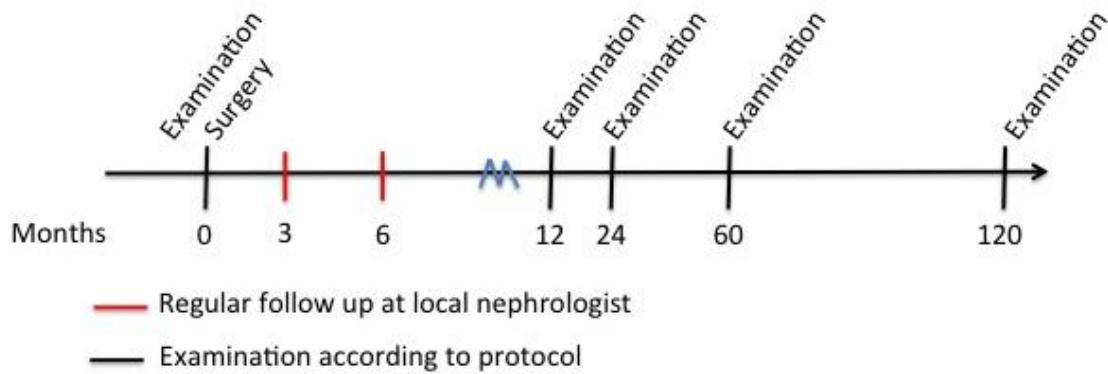

Testing

Surgery

CENS[®] - main design

Power analysis

- About 50-60 Living kidney donors
- 60 pr year
- Inclusion over a period of 2 years

CENS - subprojects

Cardiac remodeling

MR
Echocardiography

Arterial remodeling

Large vessels MR
Medium vessels Ultrasound
Small vessels Flow mediated dilatation

Potential underlying mechanisms

Inflammatory cytokines
Calcium-phosphate metabolism biomarkers and DXA

Conclusion

Donors

- Select donors
- Correct information

CKD patients

- Mechanistic insight
